AIRPORT REPORT

Airport Report saves time and paperwork!

DMi Airport Report provides realtime insight in the whereabouts of all your airport support activities. To make sure the airport is accessible at any time, we've created a system which allows you to respond accurately to any situation that comes your way.

In quick and easy steps you'll be able to plan your vehicles and workers using the realtime information about your work in progress. Airport Report gives you a view of all the machines and inspections on your map. Using colors it easily shows you the realtime situation on the runway, its exits, your aprons and so on.

This way you can control your airport support activities as if you're sitting next to the driver yourself! Airport Report saves time and paperwork and therefore money; by using the system you create clear reports which help you in becoming even better in what you do.

DMi

**DATA MINING INNOVATORS**

How does it work?

The modem on the machines precisely registers the performed activities. Everything is being saved and sent to the data center. And that's where we come in: Data Mining Innovators. Our intelligent software craftly combines all information and creates a clear and complete overview, presented via the (secured) Internet. It doesn't get more transparant than this!

THE BENEFITS IN A NUTSHELL

► You're always informed about the whereabouts and activities of your winterfleet (gritters, spreaders and snow control), sweepers and other vehicles.

► You can easily respond to any critical situation.

► You get clear and realtime insight in the used and remaining levels of your de-icing materials, salt and runway de-icers.

► Your proof of output is available online at any time.

► You have a complete overview of all your activities and work pending at the airport.

► Last but not least: all your information is stored in our secure data centers. You'll only have to focus on what you are good at: Keeping the airport safe, clean and accessible!

DMi Airport Report streamlines your workflow and allows easy and accurate accessibility of all logistic data from your airport support operations to any PC connected with the Internet.

Airport Report offers a complete solution for planning and control of several airport support services. We focus on online control (SAAS) over your sweeping, mowing and winter vehicles and also provide practical realtime monitoring solutions. Our services will help you gather reliable and accurate data to manage your critical processes. All our services are supported by WebGIS, GPS(EGNOS) and GPRS.

DMi Airport Report has been a spreader management system for more than 10 years and is being used at several airports in several countries around Europe. Amsterdam Schiphol Airport and Manchester Airport are amongst our client group.

The only thing you need is a PC with an Internet connection and you're good to go. The program can be accessed via the Internet, using a user ID and a password. This way your data is secured.

Now you have access to all relevant realtime spreader data and furthermore the system provides you with excellent geographical and other analysing tools. This way you can easily optimize your airport support operations and provide accurate reports.

Optimize your airport support operations.

DMi Airport Report can handle all spreader and gritter brands in a single system, as it is compliant with all data protocols, including NEN 15430, DAU and producer-specific data protocols. All data is obtained live and direct from your winter fleet by GPRS data connections.

Our solutions help you to monitor all work done landside and airside. Also, you will be completely informed about:

- ▶ Sweeping work completed, including the number of sweeping assignments for specific areas in the last day, week, etc.
- ▶ Mowing work in the last week, month, etc.
- ▶ Exact time registration of cleaning of surfaces (aprons, runways and other areas); management information from the DMi system serves as the basis for invoicing clients and accountability (environmental reporting).
- ▶ Tracking and tracing of all vehicles included in the system.
- ▶ DMi also provides you with detailed information on all activities via all kinds of surveys and graphs. All data can be downloaded for further easily processing in Excel.

Questions? Let us know!

If you would like to request more information or a live demonstration of possible solutions at your airport, please do not hesitate to contact us!
