

PROTECTIVE STRUCTURES

LWBR™

LWBR™ is a single, light-weight bunker roof designed for variable spans of 2.3m to 3.3m with a roof length of 5m. The roof comprises extruded aluminum parts, wood outer panelling and a high-performance polyester outer cover. HESCO® units are provided separately.

LWBR is rapid and easily constructed and is specifically designed to provide protection against indirect fire (IDF) weapons.

Ordered as a kit, the LWBR is air-transportable and subsequent kits can be added to increase length.

It is simplistic to build with simple tools, which are provided, and in-service light earthmoving equipment. The design is derived from the existing HAB™ (HESCO® Accommodation Bunker).

Blast and fragmentation testing has been carried out with mortar rounds, with no penetration of fragments through the roof.

The majority of construction takes place at ground level with partially completed roof segments lifted into place. Four persons and one piece of earthmoving equipment can construct one roof in half a day. Only 10m³ of fill is required per bunker roof.

1.....Waterproof cover provides overhead protection and a pre-detonation screen

2.....MIL unit walls (*not included*)

The product featured in this publication comes with a 2 year warranty, subject to Hesco's terms and conditions.
